

Aurora Skyline 45L — Technical Spec Sheet

The Skyline 45L is Aurora Outfitters' multi-day hiking pack, built around a ventilated foam back panel and a dual-density hip belt sized independently from the main harness. It pairs with the Aurora TerraTrek 7 boot on the Tour du Mont Blanc, the Patagonia W Trek, and the Tasmania Overland Track. This sheet documents the construction in full, with the exploded diagram below showing every load-bearing component and how they connect.

Aurora Skyline 45L — Exploded Construction Diagram

Aurora Outfitters · Technical Spec Series · SKU AURORA-SKY45

Figure 1 — Full construction diagram, all seven load-bearing assemblies.

Materials & Harness Construction

The shoulder harness uses a contoured, load-bearing strap geometry that Mara Chen's field testing shaped directly: the strap taper follows the collarbone line rather than a straight cut, which reduces the pressure-point chafing that shows up on multi-week trips. The front-view illustration alongside this paragraph shows the harness routing from the top lid down through the load lifters to the hip belt attachment.

Figure 2 — Front view: harness routing and load-lifter geometry.

Component	Material	Notes
Main body	210D high-tenacity nylon, PU coated	Abrasion-resistant, 3,000 mm hydrostatic head
Back panel foam	Dual-density EVA, channel-cut	Airflow channels reduce back-sweat contact area
Hip belt	Dual-density foam, interchangeable S/M/L	Sized independently of torso length
Compression straps	25 mm webbing, aluminium tri-glide	3 per side, adjustable for partial loads
Hardware	Duraflex buckles	Rated to 80 kg working load

Fit, Sizing & Rear Access

Torso length, not overall height, determines Skyline 45L fit. Measure from the C7 vertebra to the iliac crest: Small fits 41-46 cm, Medium fits 46-51 cm, Large fits 51-56 cm. The rear-view illustration alongside shows the ventilation channel layout and the twin ice-axe loops at the base of the back panel, which the side compression straps also cinch against for narrow loads.

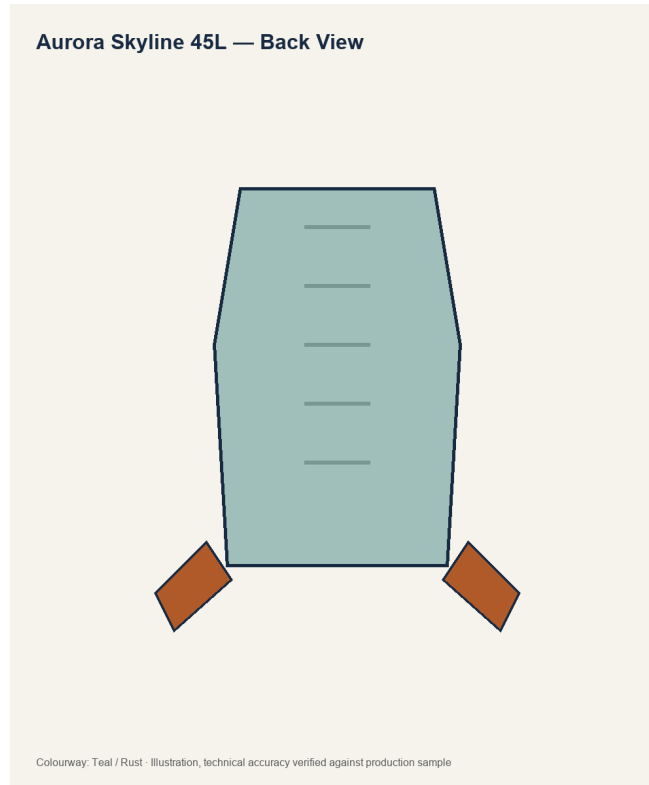

Figure 3 — Rear view: ventilation channels and hip-belt attachment points.

Trail Club Plus and Pro members can have torso length measured and the hip belt swapped free of charge at any Aurora Outfitters service depot within the first 90 days.

Field Notes From Ambassadors

"I carried the Skyline 45L for all 22 days of the Patagonia W Trek alongside the TerraTrek 7. The hip belt sizing independent of the harness is the detail that matters on a long trip — my torso length doesn't change, but I want a looser hip belt by day 15. Being able to swap just that piece, not the whole pack, is what most 45L packs get wrong."

— Mara Chen, Alpine Guide & Aurora Outfitters Ambassador

Recommended for Day Hiking, Thru-Hiking, and Light Alpine Climbing where hut-to-hut sleeping keeps the personal-gear load under 12 kg. See the Aurora TerraTrek 7 product sheet for the boot most frequently paired with this pack, and the Tour du Mont Blanc trail guide for a route where both are used together across ten days.
